

STRATA IPT2000

IPT2008F-SDL

IP hands-free featurephone with 8 programmable keys and LCD display with HTML support.

Toshiba's IPT2000 series of featurephones provide the same extensive functionality that you would expect in a digital featurephone, allowing users to choose the best device for their circumstances, without compromising on functionality.

Our IPT2000 series of featurephones also contains a 10 key display handset with an analogue interface, allowing the user to directly access a local analogue line (for example a BT line). This means that remote users can still make calls if the network is down and, more importantly, emergency calls are patched through to a local response team.

Whether working from a main or branch office, or even from home or on the move, the IPT2000 series of featurephones from Toshiba are extremely robust and reliable, providing a range of functionality to improve productivity and efficiency for the user.

Key benefits:

- » Easy identification of extension status through red/green Busy Lamp Field (BLF) indication.
- » Intelligent feature presentation through soft keys, for applications such as voicemail.
- » Easy identification of the type of call through 10 different ring tones.
- » Specific projects can be assigned a Direct Dial-In (DDI) number with a specific ring tone.
- » One-touch keys for regularly used functions such as speed dials, call pick-up etc.
- » Multiple message waiting indication allows use of shared mailboxes for specific departments or projects.
- » One-touch group pick-up with easy recall of calls placed on hold.
- » Reduce time spent searching for numbers with on-screen directory dialling.
- » IP hot desking capability, allowing a users specific features and functions to become available through a simple log-in.
- » Consistent design to the DKT3200 series of featurephones allowing a combination of digital and IP end-points to be used, whilst maintaining the same look and feel.
- » Peer-to-peer functionality in pure IP configuration minimises the bandwidth used for internal calls in branch offices, and ensures best possible quality of service for IP telephony.
